Technical Skills

Overview

Programming

0 LOC —————> 5000 LOC

Java • Springboot • SQL

Python • TypeScript • C

AWS • CDK • Terraform

Education

MSc., Computer Science (GPA: 3.7)

Specialization: Applied Computer Science

Southeast Missouri State University
2024 - 2025 | Missouri, USA

B.tech., Computer Science (GPA: 4.0)

Uttaranchal University
2017 - 2021 | Dehradun, India

Experience

May 2023 -
Dec 2023

Freelance Software Engineering Projects

Remote

- **Java + Spring Boot modernization (legacy migration + API debugging):**
 - Migrated legacy Java services toward newer Java/Spring Boot baselines by upgrading dependencies and fixing compatibility/build issues.
 - Debugged REST APIs (auth failures, serialization, null-handling, request/response mismatches, performance issues) using logs and targeted refactors.
 - Improved maintainability by modularizing code and adding practical unit/integration coverage where possible.
- **Bluetooth systems reliability testing (Ceedling + C):**
 - Enhanced reliability of car Bluetooth systems by creating/executing tests for Message Access Profile (MCE).
 - Improved audio/call management efficiency for Hands-Free Profile Clients (HFP-C).
 - Diagnosed and resolved internal tool issues; collaborated cross-functionally; automated regression scripts.
- **Cloud testing tool (GCP + AWS Lambda/DynamoDB + CDK TypeScript):**
 - Built a testing tool using GCP and AWS serverless services with IaC via AWS CDK (TypeScript).
 - Implemented CloudWatch alarms/metrics; refined data models and code quality; optimized for availability; performed code reviews.
- **Azure Data Lake ingestion automation (C#/.NET):**
 - Built a C#/.NET console app to automate ingestion of ADI files into Azure Data Lake (claimed +40% speed).
 - Configured Windows auto-start; streamlined workflows; designed modular components; tested for robustness.

Sep 2021 -
Apr 2023

Game Developer

Logic Simplified Pvt Ltd

- **Frontend (Angular/React):**
 - Built **two browser-based multiplayer game UIs** in **Angular**, delivering responsive gameplay screens and player flows.
 - Developed an **admin web portal** in **React** to manage game/application content (characters, configurations, and updates) and to view **analytics dashboards** for usage/engagement insights.
- **Backend (Node.js/Java, Real-time):**
 - Implemented **real-time multiplayer networking** using **WebSockets** and **Colyseus**, enabling low-latency state sync, room/session management, and multiplayer game loops.
 - Improved performance and code quality through systematic debugging/refactoring and collaborative development in Agile sprints; supported CI/CD-driven releases.
- **Cloud (GCP + Notifications):**
 - Designed and implemented a **notification scheduling + delivery pipeline** for **Windows, Android, and iOS** clients.
 - Wrote scheduler and notification logic to trigger requests to **GCP**, which then delivered push notifications to client applications reliably and at scale.
